## **C2C Aluminium Company Profile**

---

Manufacturing and Installation of  
Aluminium Windows, Doors and Glass  
products across South Africa

# Business Overview

The Business was established in 2003 and we are committed to Excellence. We have long term relationships with our customers and we strive to keep them satisfied by supplying good quality products that meet specific requirements, needs and preferences. All our products are high performing, versatile and cost effective. The Principal Business of C2C Aluminium is to supply you the Customer with the best service and products at all times.

We are partnered with selected specialized manufacturers and suppliers who can manufacture, supply and deliver to all the major destinations throughout South Africa as well as to our neighbouring countries.

Whether you are involved in a new building project, refurbishment or renovation, we can supply you with superb quality sliding doors, folding stacking doors, french / double doors , window systems, sliding windows, pivot windows, top hung and side hung windows, framed showers, shop fronts and double glazing products.

We are also partnered with specialized glass suppliers/manufacturers for all types of glass applications i.e. toughed safety glass for all applications, toughed laminated glass, curved glass for various applications, frameless glass applications with specific cut-outs (showers, shop fronts)

Rest assured that your product meets all the strict requirements of the National Building Regulations regarding glazing and deflection set by **SAGGA** (South African Glass and Glazing Association), and also to the high manufacturing standards and code of ethics as set out by **AAAMSA** (Association of Architectural Aluminium Manufacturers of South Africa).

Please visit our website at [www.c2calu.co.za](http://www.c2calu.co.za) to see some of our exciting projects.

## A Few facts about aluminium and why you should consider it for your home or industry.

- Aluminium's density is only one-third that of steel, and thus very light, and yet a very durable metal making it Ideal for windows and doors.
- Aluminium is very strong, as any aluminium alloys can match the strength of steel, if not exceed it, with the benefit of almost no maintenance compared to other options for windows and doors.
- Aluminium is not easily soluble in water, which makes it resistant to weather, and common gases within the atmosphere. Aluminium naturally generates a protective oxide coating and is highly corrosion resistant. Different types of surface treatment such as anodizing, powder coating or lacquering can further improve this property. It is particularly useful for applications where protection and conservation are required.
- Aluminium is 100 percent recyclable with no downgrading of its qualities. The re-melting of aluminium requires little energy: only about 5 percent of the energy required to produce the primary metal initially is needed in the recycling process.
